Repayment Options available

Savings to offset repayments

How the solar VPP works ?

1

Your solar powered home becomes a VPP (Virtual Power Plant) with compatible battery and inverter combination.

2

Your home charges the solar battery which stores energy and powers your home 24 hours a day. The inverter is connected to VPP software via cloud technology.

3

Revolutionary cloud based software monitors your inverter and the grid's energy demand. At the optimum moment the software sells your excess power back to the grid, maximizing your energy income.

4

Using mobile app, you can easily track the trades and your income statements from the comfort of your phone. You can decide to trade yourself when the time is right.

What makes our VPP special?

3 key algorithms for superior results

We harness market insights and big data from the 6GW of solar power installed across Australia through One Stop Warehouse to power 3 key pieces of proprietary software.

Software to analyse a household's usage pattern and forecast demand

Software that optimises a household's rooftop solar generation and battery

Software that forecasts wholesale energy prices with superior accuracy

Benefits of Virtual Power Plant

Compatible Systems

Experience of existing DE Customers

VPP customers in less than three months reduce their bills to zero and start earning credits. In fact, 93.7% of all our VPP customers earn credits, and on average earn \$85.65 every month through energy trading and Discover Energy's premium solar feed-in tariffs for VPP. Discover Energy's VPP is also the first VPP energy trading platform in Australia that can be user-enabled.
